LEAF Feedback Request

Mar 27, 2026

We value your feedback! This short survey will help us understand your needs related to paused workflow steps and requestor-initiated cancellations. Your responses will help us improve how these features behave and ensure they better support your day-to-day processes. Thank you for taking 3–5 minutes to share your feedback.

* Required

Paused Workflow Steps

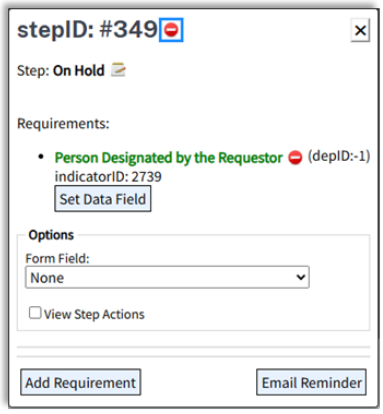
How steps should behave when a request is intentionally placed on hold.

1

Current State:

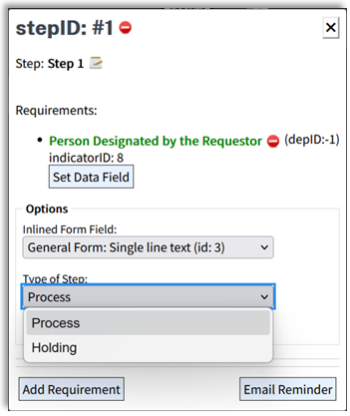
When a workflow step is intended to pause progress, teams typically name the step “On Hold” or “Holding.” However, even when labeled this way, the step continues to behave like a normal active step. Today, you can expect that a step named “On Hold” will:

- Appear in the Inbox
- Count toward the Resolution Time in the Timeline Explorer
- Appear in the Unresolved Request list
- Show the “Pending” prefix on the main page and in Report Builder



2

Future State:



In the updated workflow design, users will be able to intentionally set a step's behavior by choosing whether it functions as a normal "In Process" step or as a "Holding step". Selecting the Holding option will ensure the system treats the step differently and accurately reflects that the request is paused.

A record in a "Holding" step:

- Does not show up in the Inbox
- Does not count against the Resolution Time in the Timeline Explorer
- Does not show up in the Unresolved Request list
- Does not include the "Pending" prefix in the status column on the main page and report builder

Example:
If an approval step is assigned to a role that's currently being backfilled, requests may sit for days or weeks before the new staff member is onboarded. In this situation, using a Holding step allows the teams to:

- Pause the request until the position is filled
- Avoid giving the impression that someone is falling behind or the request was overlooked
- Prevent the request from showing up as a bottleneck or overdue in reports

This reflects the reality that the delay is due to staffing transitions, not workflow inaction, and keeps the process clean while the role is being backfilled.

We Could Use Your Feedback!

4

How often does your team encounter workflow steps where a request is intentionally paused or placed on hold?

*

- ◯ Never
- ◯ Rarely
- ◯ Sometimes
- ◯ Often
- ◯ Very Often

5

When a workflows step is intended to be paused, which label best fits your expectations? *

- ◯ Holding
- ◯ In Waiting
- ◯ Other

Requestor Cancellation Permissions

Should requestors be allowed to cancel their requests at any stage of the workflow?

6

Current State:

Today, only administrators or the active approver (the user assigned to the current pending step) can cancel a request. When a cancellation occurs, all prior participants are notified.

Key Considerations if This Were to Change:

- Potential benefits: more flexibility for requestors, fewer admin interruptions
- Potential risks: possible workflow disruption, timing concerns, and impacts to downstream processes

7

We Could Use

Your Feedback!

8

Should requestors be allowed to cancel their own requests at *any* stage of the workflow? *

- ◯ Yes
- ◯ No
- ◯ Other

9

If other, please explain *

10

How often do your workflows require the need for the requestor to cancel their own request? *

- Never
- Rarely
- Sometimes
- Often
- Very Often

11

How do you imagine the cancel request feature should work?

Stay Connected

Let us know if it's okay for our team to follow up with you.

12

If we have follow-up questions about your responses, would you be open to us contacting you? *

- ◯ Yes
- ◯ No
